

# Protection at Your Fingertips

Protection First Double Gown Pocket Door Caddy puts personal protective equipment at your fingertips with two upper pockets, one large middle pocket (with a clear front to display special instructions), three lower glove pockets and two large back pockets (for storing gowns or other large items).

This isolation door caddy helps meet CDC recommendations for standard, airborne, droplet and contact isolation compliance. It also facilitates compliance with fire, logistic and regulatory codes by replacing bulky and obstructive carts at bedside and in hallways. It is made in Ohio from flame-resistant, 420-denier urethane-coated nylon (passes CA117E fire test).

The Double Gown Pocket Door Caddy comes with two universal-fit metal door hangers and two adjustable straps to position medical supplies at the most convenient height on any door. The caddy can be mounted using track mounting, suction cups that support 20 pounds (for glass doors and smooth surfaces), outside wall mounting and swivel clasps.
