

# Protection at Your Fingertips

Protection First's PPE Door Caddy with Upper Glove Pockets makes organizing PPE easy with three upper pockets, one large middle pocket (with a clear front to display special instructions) and two lower pockets.

This PPE caddy helps meet CDC recommendations for standard, airborne, droplet and contact isolation compliance. It also facilitates compliance with fire, logistic and regulatory codes by replacing bulky and obstructive carts at bedside and in the hallways. It is made of flame-resistant, 420-denier urethane-coated nylon (passes CA117E fire test).

The PPE Door Caddy with Upper Glove Pockets comes with two universal-fit metal door hangers and two adjustable straps to position medical supplies at the most convenient height on any door. The PPE caddy can be mounted using track mounting, suction cups that support 20 pounds (for glass doors and smooth surfaces), outside wall mounting and swivel clasps.

## PPE Door Caddy with Upper Glove Pockets
